2. Requirement Analysis Phase

PROFESSIONAL PROJECT REPORT

2. Requirement Analysis Phase

Phase Objectives

- Define system functions.
- Identify functional and non-functional requirements.
- Determine hardware and software requirements.
- Define input, processing, output and validation needs.

Functional Requirements

FR-01 accept income; FR-02 accept expenses; FR-03 calculate total expenses; FR-04 calculate remaining budget; FR-05 estimate savings rate; FR-06 accept category and recommendation budget; FR-07 display matching recommendations.

Non-Functional Requirements

The system should be usable, responsive, reliable, maintainable, scalable and safe in handling user input.

Hardware Requirements

Computer with at least 4 GB RAM, modern browser, keyboard and mouse, and internet when required.

Software Requirements

Python 3.10+, Flask, HTML5, CSS3, JavaScript, VS Code or another editor, Git, GitHub and a modern browser.

Expected Outcome

A documented requirement specification to guide design and development.
