

POCKETSMART AI

6. Project Testing Phase

PROFESSIONAL PROJECT REPORT

6. Project Testing Phase

Phase Objectives

- Verify all major functions.
- Identify calculation, validation and interface errors.
- Confirm expected results for valid and invalid inputs.
- Improve reliability before demonstration.

Testing Types

Unit testing for individual functions; integration testing for frontend/API/backend; functional testing for features; usability testing; responsive testing; error-handling testing.

Sample Test Cases

TC-01 income ■30,000 and expenses ■10,000 → remaining ■20,000. TC-02 zero income → safe handling. TC-03 multiple expenses → correct total. TC-04 budget ■1,000 → only affordable items. TC-05 no match → empty-result message. TC-06 invalid input → validation message.

Bug Handling

Record the issue, reproduce it, identify the module, fix it, retest it and perform regression testing.

Expected Outcome

A tested and reliable application with documented test cases.
